

Asset Performance:

Rsl 03 Natural hazard risk assessment

Credits

No Minimum Standard

Aim

To encourage the identification of the risks from natural hazards and build capacity to recover quickly following a damaging event.

Question

Has a risk assessment been carried out to understand an asset's exposure to current Natural Hazards?

Credits	Answer	Select a single answer option
0	A.	Question not answered
0	B.	No
2	C.	Yes, and emergency plans have been developed for all relevant Natural Hazards
4	D.	The asset is in an area where no risks exist

Assessment criteria

Criterion	Assessment criteria	Applicable Answer
1.	A natural hazard risk assessment needs to be undertaken by a relevant organisation / authority or a competent individual.	C
2.	The emergency plan includes a coherent emergency strategy for all relevant natural hazards for the time period specified.	C
3.	Responsibility for emergency plans have been delegated to relevant individuals within the organisation at the asset and communicated appropriately to building users.	C
4.	If there is no perceived threat from natural hazards this should be outlined in appropriate documentation from a relevant authority or expert.	D

Evidence

Criteria	Evidence requirement
-	The evidence below is not exhaustive, please also refer to the 'BREEAM evidential requirements' section in the scope of the Guidance for appropriate evidence types which can be used to demonstrate compliance.
1,2,3,	A copy of the natural hazard risk policy/strategy including: - evidence of the competence of the relevant organisation or individual - the name the individuals that responsibility has been delegated to. - evidence that it has been communicated appropriately to building users.
4	For assets that list no natural hazard risk exists: Documented confirmation from relevant agency/experts that the asset is in an area of no risk.

Definitions

Competent individual:

An individual (or individuals) with relevant technical and professional experience suitable to:

- Determine the potential for natural hazards in the region of the development
- Determine the likely impacts on the site, building and locality
- Subsequently identify appropriate mitigation measures This (or these) individual(s) should practice to and abide by a professional code of conduct or similar.

Natural hazards:

Natural processes or phenomena occurring in the biosphere or crust that may constitute a damaging event. The list below is not intended to be exhaustive but provides an indication of the type of hazards that should be considered to meet the definition. Other natural hazards may be relevant under this issue. Relevance will be dependent on local geography, geology, hydrology and climate factors and the Assessor should be satisfied that appropriate local expertise has been sought by the client to identify these fully:

- Floods
- Natural disasters of geological origin such as volcanic eruptions, earthquakes, landslides, tsunamis and tidal waves
- Natural disasters of climatic or meteorological origin such as droughts, avalanches, wave surges, and windstorms including cyclones, hurricanes, tornadoes, tropical storms, and typhoons
- Wildfires
